## Referral Rewards

Refer a friend, neighbor or family to Arbor Masters and receive a \$25 gift certificate when they purchase any of our services.

## Arbor Master Locations

- Kansas City Metro Wichita, KS
- Oklahoma City, OK
- Tulsa, OK
- Ft Worth, TX
- Ocala, FL
- Tampa, FL

Oaks are the King of shade trees. Their stature and longevity make them ideal for shading outdoor spaces and lowering energy bills in the summer. A healthy Oak will highlight the landscape and increase property value and appeal. Pin Oaks in particular can thrive in many different soil types, but they can also suffer in heavy clay soil.

The high pH typical of clay soils can make it difficult for Pin Oaks to absorb Iron, which may cause Iron Chlorosis. This causes leaves to fade from dark, lush green to yellow with the leaf veins remaining green (see picture example above). If left untreated, the leaves will continue to fade, eventually drying up and falling off in the heat of the summer.

## How can you prevent this from happening?

Iron injections performed by professionals can give your trees the nutrients they need, speeding absorption to the entire canopy, making the foliage healthy and green again. Proper diagnosis is the key to the survival of your trees. If you notice yellowing of the leaves on your Pin Oaks or any of your ornamental or shade trees, it may be Iron Chlorosis. Our Trained Arborist can evaluate your trees and provide the proper treatment.
