

Aphids, Scales and Mites...Oh My!

Protect Your Plants and Trees from Aphids and Spider Mites

As the summer heats up, uninvited guests such as Aphids and Mites are starting to make their appearance in gardens and trees throughout the Midwest. Over time, like any insect, their life cycle ends or they move on. It's the damage they can cause before they move on that is either a problem for the health of the tree or an inconvenience for the homeowner.

Some of the most commonly encountered arthropod pests found on plants are those that feed on plant juices, i.e., sap-sucking pests. [...continue reading article by clicking here.](#)
