

**Arbor Masters**  
Tree & Landscape®

## Spring Essentials

We have survived the long, cold, Midwest winter and can finally see bulbs popping up in the garden and hints of green appearing on the trees. The winter may be over but your trees and plants are still feeling its bitter effect. Many species of trees are showing signs of winter freeze damage due to extreme temperatures. Browning, discolored needles and tip die back suggest your trees and plants have been damaged by winters freezing temperatures. In many cases, deep root fertilization will help to restore nutrient balance and promote new root growth.

### Healthy Trees Add Value

Keeping your trees in top condition by pruning damaged and diseased limbs will encourage growth and prevent further damage during spring storms. As we finally get out of this winter season and start to spend time outside, please take the time to look around your property and call us with any questions or concerns.
